Presentation Outline

- ① Project basis, scope and activities
- ② Key impacts and results
- ③ Learnings and recommendations

Evolving clinical & political context

Rapid scale-up

Fast-Track Targets

by 2020

90-90-90

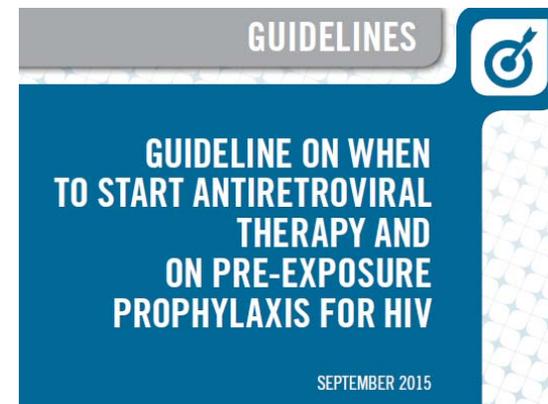

Treatment

by 2030

95-95-95

Treatment

Treat all

Universal health coverage

SUSTAINABLE DEVELOPMENT GOALS

Public health approach*

Decentralization

Simplification

Task-shifting

Lay cadres

Sustainability/ cost effectiveness

Lower frequency of clinic visits

Community models

**WHO 2006+*

segregation

Formal health
system

*Providers lack community
engagement/ integration
skills*

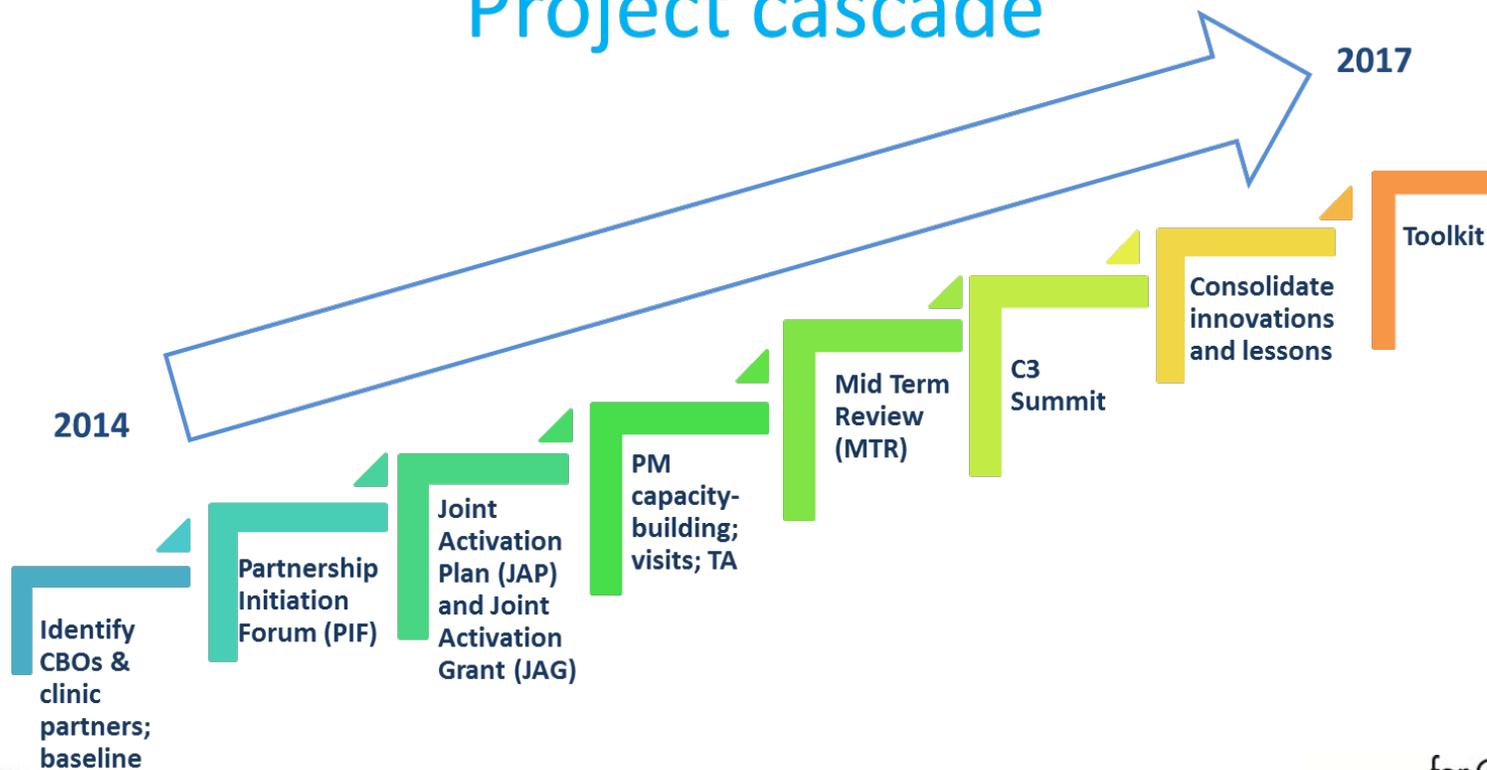

Community

*CBOs lack technical
capacity*

Limited mechanisms/ entry points

Clinic-CBO Collaboration (C³)

Project cascade

Partnership support

- Partnership Initiation Forum
- Seed funding
- Monthly individual and partnership conference calls
- WhatsApp communities of practice
- Site visits
- Mid-Term Reviews
- TA, where possible
- Distribution of relevant materials, tools and guidelines
- Link to country support partners and mechanisms
- Regular e-mail contact and trouble shooting

Joint activation plans

Project name:	IMPROVING RETENTION OF MOTHER-BABY PAIRS AT BOBI HEALTH CENTRE III, Gulu – Northern Uganda
Please briefly describe your project <i>(Please note: Focus on one small project or activity area that links to your priority from yesterday)</i>	Bobo Health Centre III has 49% retention which is below the required National target of 100% and this is a challenge. The health facility/clinic has 115 Mothers' Baby Pairs (MBP) currently enrolled in PMTCT. Monthly average enrolment of MBP's ranges between 3-6 of newly exposed babies; 51% is however lost to follow up and they are at risk for acquiring new infections as they do not access the required PMTCT intervention services.
What priority challenge will be addressed by this project? Please describe the problem and how it has affected your clinic/CBO and/ or its patients/clients	Currently, the health facility/clinic is faced with a challenge of lost to follow up of MBP's standing at 51% which should be addressed by the project. As a result this has led to reduced drug adherence, low retention of MBP's, increased risk of new infections, HIV/AIDS progression and increased morbidity to low male involvement in health care and support continuum
What is the project aim? (keep it SMART) How will this project address the key challenge?	The project aims to increase retention of MBP's from 49% to 80% at Bobo Health Centre III by August 2016; To address these, there is need to conduct community awareness, training of VHT's linkage facilitators, mother-father mentors, organize point integrated out reaches, organize home visits and follow up activities, conduct coordination meeting to address gaps and progress updates of partners, organize community male meeting and dialogue sessions to address factors associated with loss to follow ups of MBP's so as to increase retention and upscale enrolment of mothers, babies and male partners in the PMTCT program intervention in Gulu district, Northern Uganda.
How will you know if the project has been successful?	<ul style="list-style-type: none"> - Indicators in----- numbers of cost MBP's FOOLWED UP - Number of those followed and brought to care - Improved retention from 49% to 80% - Follow up reports - Using review and case studies and case reports

Beneficiaries

Activities & outputs

Who are the main beneficiaries?	Exposed infants, Mothers (Positive and breastfeeding), Male partners			
What is the general age of the beneficiaries?	0 – 49 years			
What do you expect the gender breakdown to be?	Male:	30%	Female:	70%
Approximately how many beneficiaries will be reached?	400 beneficiaries			

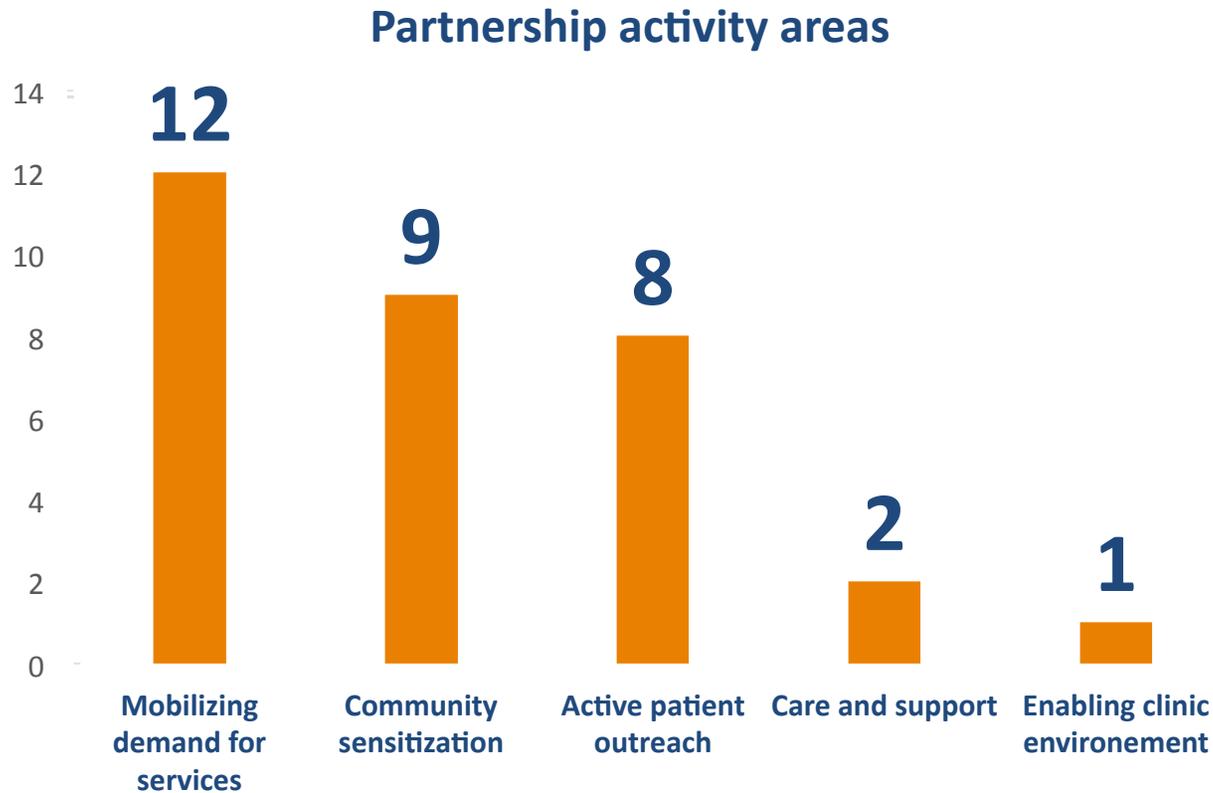

Priority challenge

SMART aim

Clinic & CBO responsibilities

Actions, activities, or outputs needed to achieve the project aim	When will this activity be completed? (Please tick only one)			Who will be responsible for this? (Please tick only one)		
	Start-up		On-going	Clinic	CBO	Clinic & CBO
	6 months from now	12 months from now				
1 Organize mapping and verification of MBP's at facilities						
2 Organize project debriefing to CBO'S/Clinic						
3 Identification of VHT's linkage facilitators, mentor mothers and fathers training						
4 Conduct community awareness on PMTCT						
5 Conduct follow-ups, home visits of clients at home.						
6 Organise coordination meetings at facilities						

36 projects, 9 countries

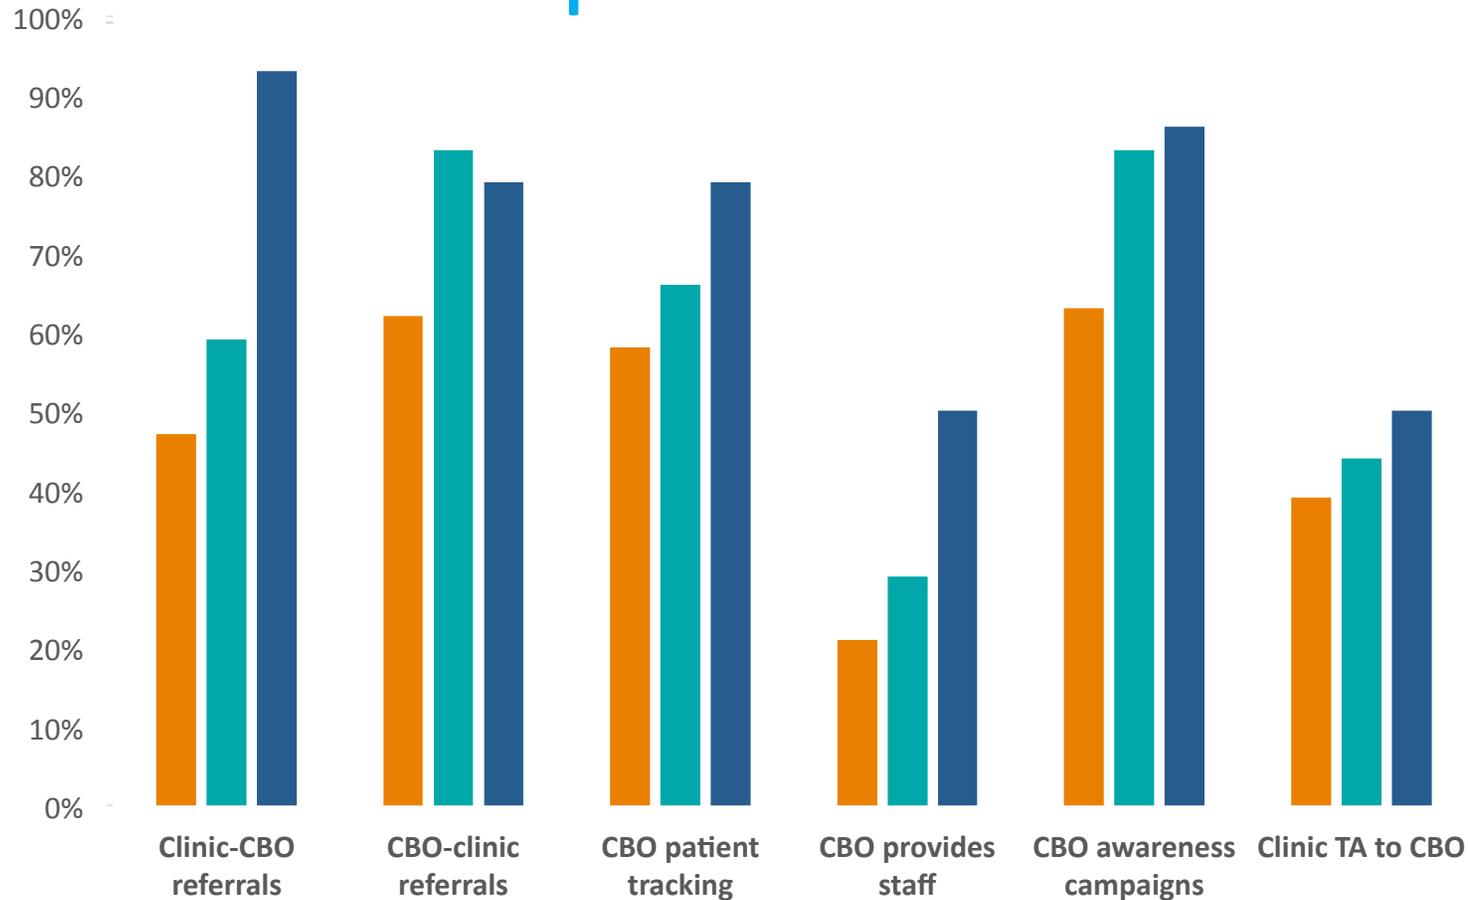

n=32 Ethiopia, Malawi, Nigeria, Uganda, Cameroon, Zambia, DRC, Kenya

Partnership example

- Chazanga Clinic & KCIA C3 partnership
- LTFU among HIV-infected pregnant women
- Limited capacity for retention support & follow-up
- Women's Savings Club & peer supporters
- Institutional births & cost savings
- Joint planning, case discussion & communication

Evidence of impact: Joint service provision

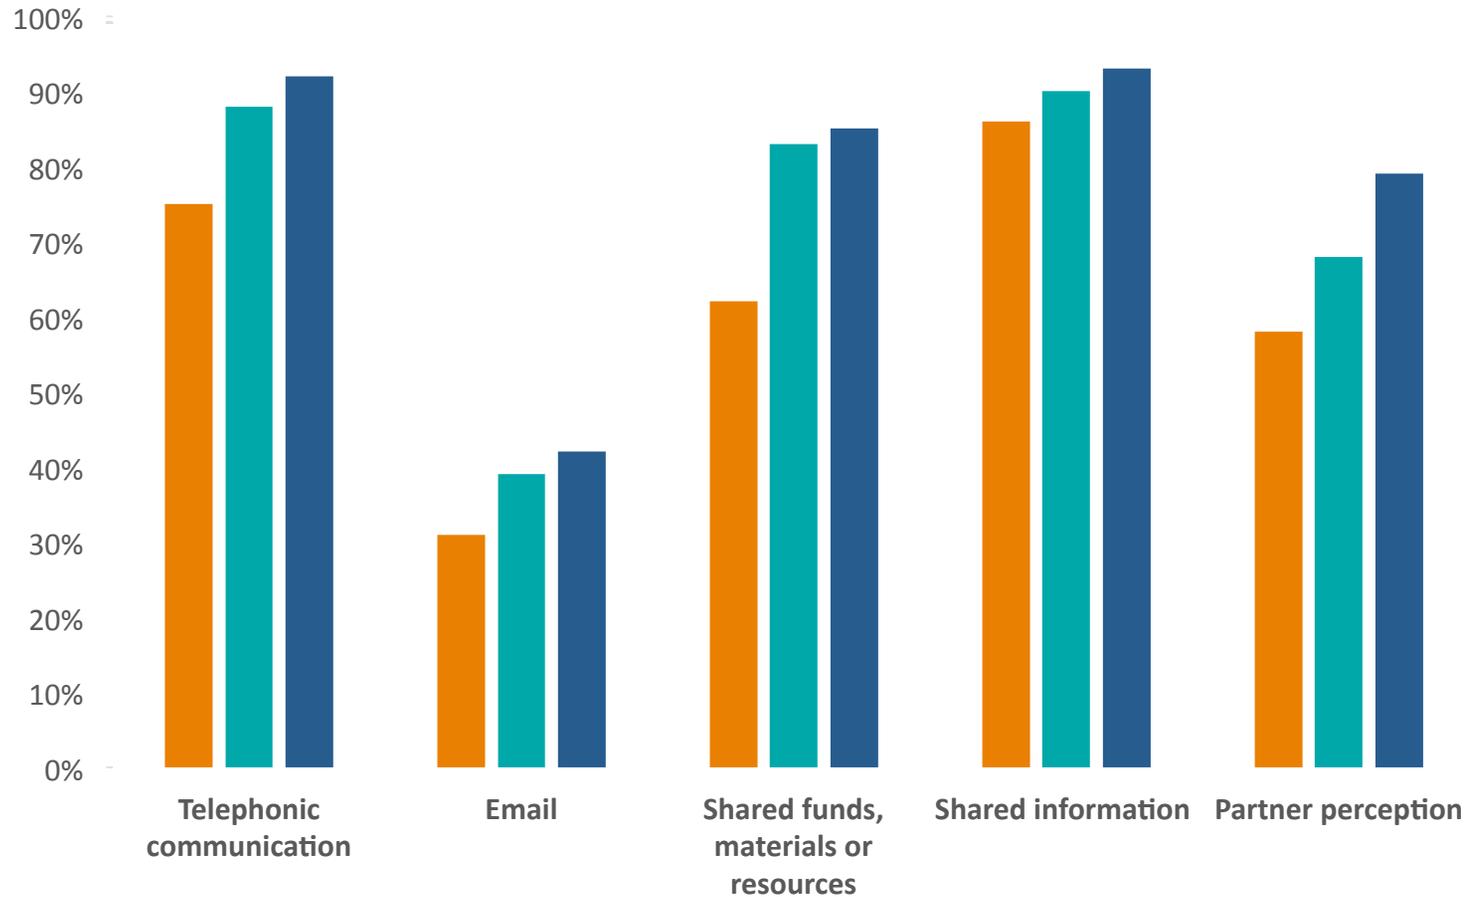

■ Baseline ■ 6 mo* ■ 12 mo**

*n=23 Ethiopia, Malawi, Nigeria, Uganda, Cameroon, Zambia

**n=8 Ethiopia, Malawi

Evidence of impact: Partnerships

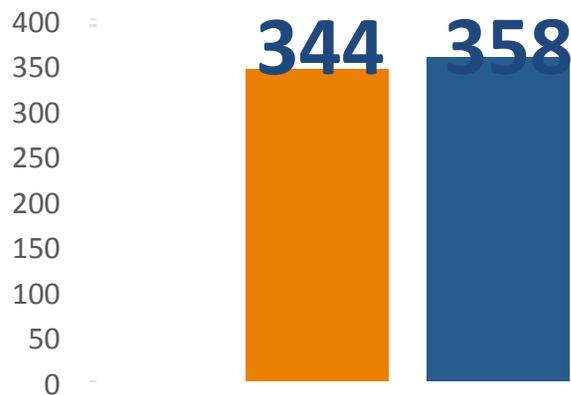

■ Baseline ■ 6 mo ■ 12 mo

*n=23 Ethiopia, Malawi, Nigeria, Uganda, Cameroon, Zambia
**n=8 Ethiopia, Malawi

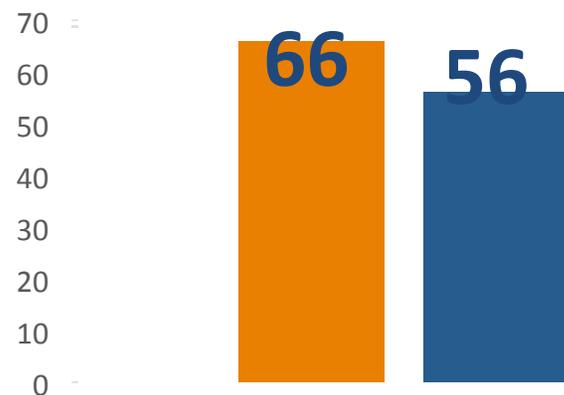

Evidence of impact: Patient outcomes

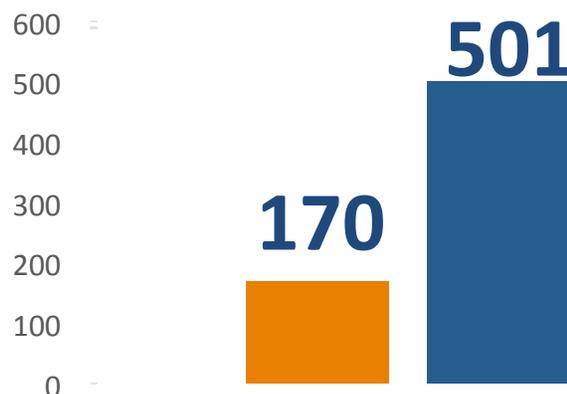

Women initiating PMTCT

■ Baseline ■ Latest data

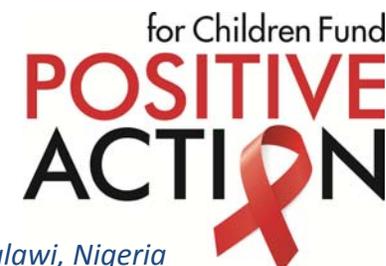

LTFU within PMTCT program

■ Baseline ■ Latest data

Infants testing at 18 mo

■ Baseline ■ Latest data

*n=12 Ethiopia, Malawi, Nigeria

Recommendations & implications

- Collaborative planning and formalised arrangements
- Designated project champions
- Mutual respect and recognition
- Open and regular communication
- Record-keeping
- Linkages, referral and coordination protocols
- Allocated partnership administration costs
- Capacity-building

Thanks

- **Doortje 't Hart STOP AIDS NOW!** on behalf of the CCABA
- **Dominic Kemp**s and the **Positive Action for Children Program**
- **Daniella Mark** and **Lebo Montewa PATA**
- **Chazanga Clinic** and **Kabangwe Creative Initiative Association**
- **Health teams and CBOs across C3**
