# Marketplace Flipcharts Outline
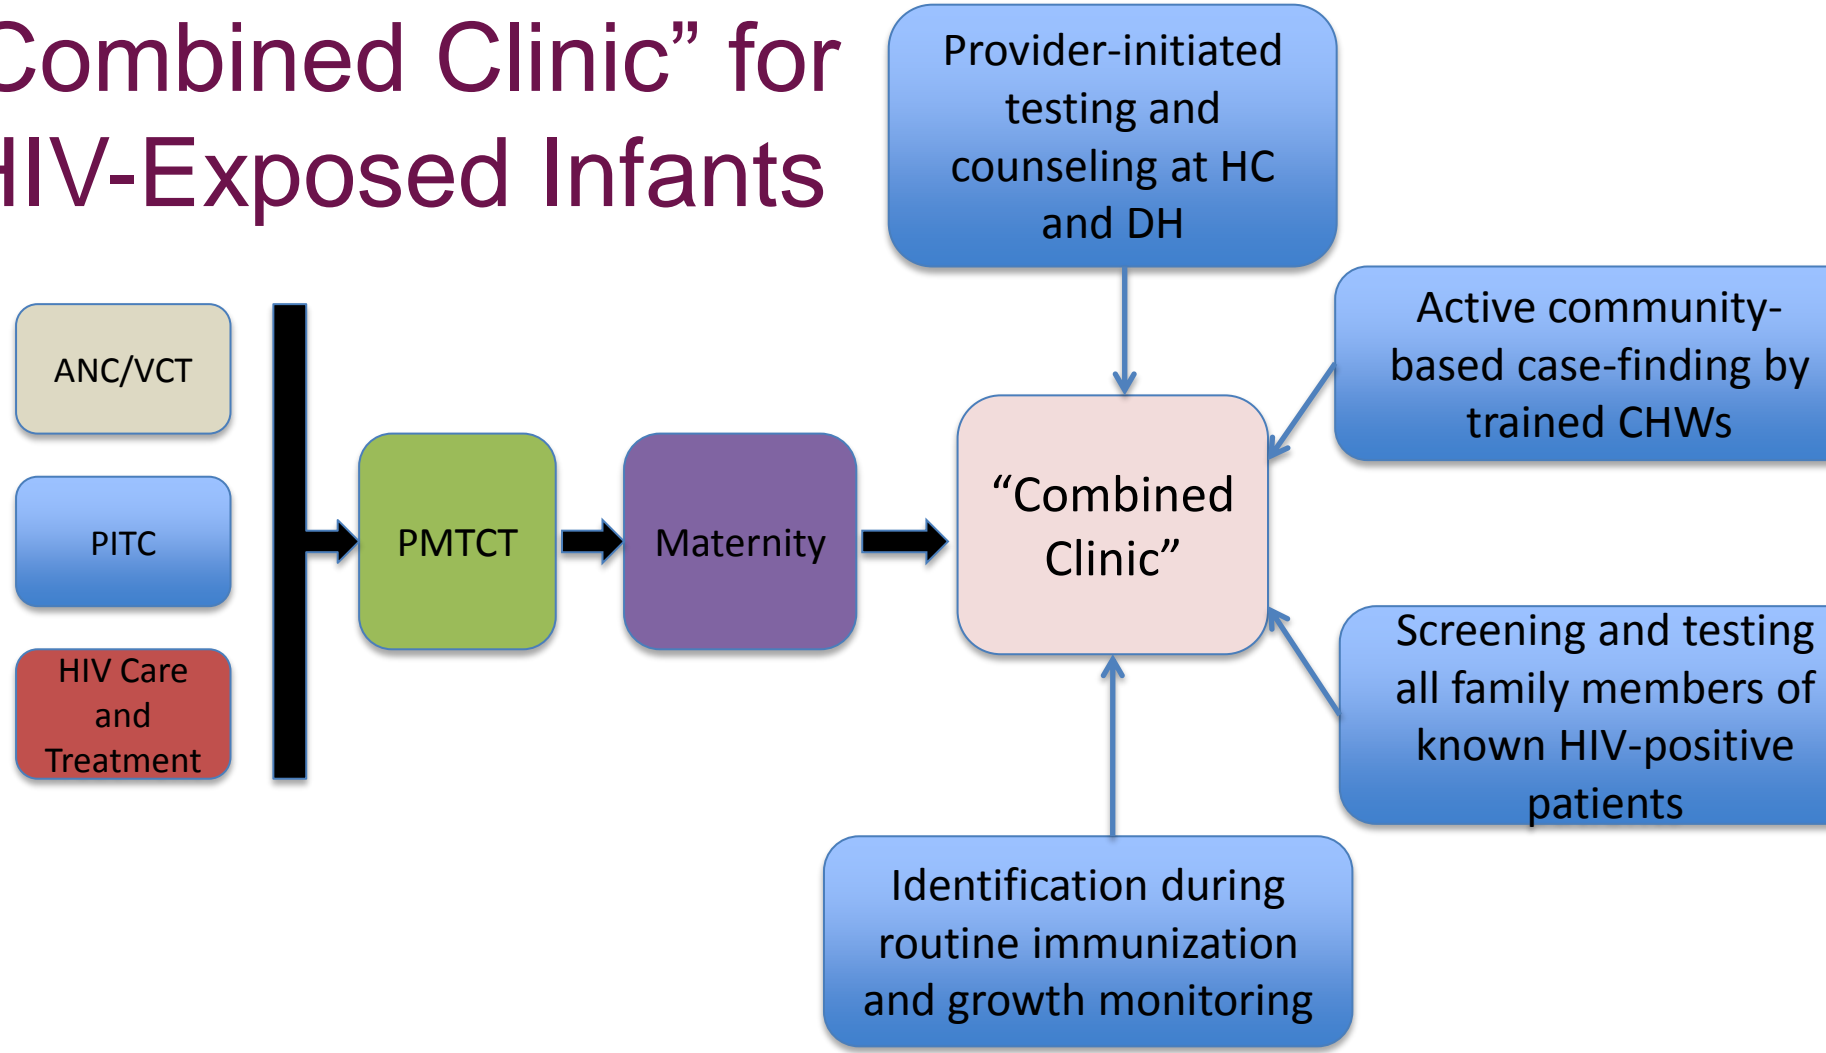

- Flipchart 1: Integration diagram + list of integrated services

- Flipchart 2: "Key Entry Points"

- Flipchart 3: "Key Implementation Challenges"

(following slides will be printed large for display on flipcharts)

Partners In Health

Integration of services for HIV-exposed Infants: "Combined Clinic"

Maternal HIV Services	Infant PMTCT Services
MNCH Services for mother and child	Family Planning Services

"Combined Clinic" for HIV-Exposed Infants

Partners In Health

Key Entry Points for "Combined Clinic" for HIV-Exposed Infants

ANC/VCT

PITC

HIV Care and Treatment

PMTCT → Maternity → "Combined Clinic"

Provider-initiated testing and counseling at HC and DH

Active community-based case-finding by trained CHWs

Screening and testing all family members of known HIV-positive patients

Identification during routine immunization and growth monitoring

Partners In Health

Key Implementation Challenges and Solutions

Key implementation challenges	Current status and solutions
Orientation of Integration	• Combined clinic oriented towards HIV-exposed infants and their mothers • Other discussions to integrate HIV into MNCH services at national level • FP has been integrated into HIV services nationally
Integration of Trainings and Protocols	• Informal training provided by PIH, though not yet formalized • No integrated trainings yet at the national level • National policy recommends integration, but no integrated protocols yet
Integration of Tools (charts and registers)	• National mother-infant register for PMTCT developed and distributed • No integrated charts; linkages created in chart organization and via EMR
Integration of Reporting and M&E	• PIH has developed integrated reporting of mother-infant pairs via EMR • No national integration of reporting yet
Evaluation of integrated services	• PIH plans to evaluate the retention in care, child survival, maternal outcomes, and patient satisfaction with integrated services
